**HARRIS Sampling Tools™**

## Manual Processing of your ID226 Specimens just got Easier!

This unique line of patented scientific sampling devices is designed to simultaneously cut, retrieve and store samples from the ID226 for forensic, chemical and biological analysis. The graduated ejection mechanism allows samples to be rapidly ejected into micro tubes, onto microscope slides, FTIR stages, SEM stubs, or other sample holders.

The precision Swiss machining ensures accurate core diameters ranging in size from 00.35 to 8.00 mm i.d. ensuring reproducibility between sample extractions. The double ground cutting edge cuts rather than shears source materials, all but eliminating the creation of artifacts and potential cross contamination.

➤ **Harris Micro-Punch® (HMP)**

The 1.20 mm, 2.00 mm and 3.0 mm i.d. Harris Micro-Punch® established the industry standard sampling sizes for DBS collection cards. The Harris Micro-Punch® (HMP) is designed to simultaneous cut, retrieve and store cored samples in one operation. The Harris Micro-Punch® is more robust, enabling the HMP to be used on substrates of increasingly denser compositions. The razor sharp cutting tip is made from SS 440c rod. The plastic HMP barrel and knob-screw assembly are constructed from injection molded, high tech, lubricated plastic to eliminate sticking.

➤ **Harris Uni-Core™ (HUC)**

The Harris Uni-Core™ is a limited use, disposable multi-purpose coring tool consisting of a razor sharp stainless steel cutting tip designed to simultaneously cut, retrieve and store cored samples in one operation from such materials as paper, gels, cloth, leaves, paint chips, films, tissue or other thin substrates.

Unlike the more robust Harris Micro-Punch® the Harris Uni-Core™ is available in many more coring diameters. The double ground, razor sharp cutting edge, ensures extended sampling use on a wide variety of substrates. Each Harris Uni-Core™ is sold with a protective cover cap over the cutting edge and in its own individual pouch, sterilized and sold in boxes of 25 pcs.

A 2.50 x 3.00 x 0.70 inch thick, inert, self-healing Harris Cutting Mat™ with dual cutting surfaces is sold separately.
